

Is obsolete software increasing your risk?

7Sigma / SECURE
Systems INC

If you're not running the latest release on every platform, across your infrastructure, you're opening the door to cyberattacks. Protect your network today!

Patching

7Sigma's cloud-based platform allows technology teams to manage and secure their endpoints from anywhere, providing real-time visibility and control over their environment.

Key features:

- **Automated Updates:** Automatically update operating systems, third-party software, and custom applications to fix security vulnerabilities and ensure compliance.
- **Policy Enforcement:** Ensure endpoints comply with organizational policies and configurations to boost security and performance.
- **Simplified Software Distribution:** Streamline the process of distributing and installing software across multiple endpoints.
- **Vulnerability Management:** Identify, prioritize, and remediate security vulnerabilities across your IT infrastructure.
- **Cross-Platform Support:** Manage endpoints on various operating systems, including Windows, macOS, and Linux.
