

You rely on your servers. Ensure they're protected.

7Sigma / **SECURE**
Systems INC

Whether they're
cloud based or on-
premise, your
servers need
protecting!

Server Advanced Threat Protection

We utilize AI and machine learning to detect and block threats, including malware, ransomware, exploits, and zero-day attacks in real-time, to secure both your on-premises and cloud-based servers.

Key Features:

- **Advanced Threat Detection:** Identify and block malware, ransomware, exploits, and zero-day attacks in real time.
- **Behavioral Monitoring:** Malicious activity detection, even without traditional malware.
- **Real-Time Visibility & Forensics:** Detailed forensic data and visibility for rapid threat detection and response.
- **Automatic Threat Remediation:** Automatically resolves threats and allows rollback to pre-infection states
- **Ransomware Protection:** Detection, blocking and recovery to ensure server continuity and data protection.
- **Compliance Reporting:** Comprehensive reporting for regulatory compliance and internal audits.
