Automated Network Inventory

Automated network inventory helps organizations simplify and keep track of devices and software on their network without manual intervention.

Key features:

- **Automated Device Discovery:** Continuous network scans detect and maintain an up-to-date inventory
- **Asset Lifecycle Management:** Monitors network assets & identifies outdated or end-of-life devices
- **Software Tracking & Compliance:** Ensures licensing compliance and detects unauthorized installations
- **Visual Network Mapping** for troubleshooting & management

Keep track of your devices and software and avoid wasting time!
